## Digital Keg Scale - 5265117

Taylor's digital keg scale is a valuable tool to take the guesswork out of how much beer is actually in the keg with instant, accurate weight measurements. With a weight capacity of 440lbs, Taylor's keg scale can measure a variety of kegs from a Cornelius Keg to an Import Keg.

KEG SIZE	HEIGHT	WIDTH (Diameter)	WEIGHT (Full)	WEIGHT (Empty)
Cornelius Keg	23"	9"	55 lbs.	9 lbs.
1/6 Barrel	23 3/8"	9 1/4"	58 lbs.	16.5 lbs.

## MAXIMIZE PROFITS

Stop pouring profits down the drain. Taylor's keg scale can assist with calculating liquor costs or used in conjunction with a more advanced liquor inventory system. Using a keg scale can hold bartenders accountable for selling every pour, wasting beer by pouring it out, handing out free beers, etc.

## INVENTORY CONTROL

Weighing the keg is more accurate in determining fullness. Management can calculate the amount of beer poured not sold in comparison to draft beer sales in the POS system or register.

## INVENTORY VERIFICATION

Weighing kegs allows management to determine the exact amount of beer they are receiving and effectively track draft beer usage.

## EASY-TO-USE AND VERSATILE

Taylor's keg scale features a slim 1.5" profile which allows heavy kegs to easily slide on for measurement readings, no heavy lifting required. This can also be used as a receiving scale for food boxes to ensure what is delivered matches the invoice price.

## SWING-A-WAY® Commercial Openers

Combining classic, time-tested design with modern innovation, Swing-A-Way® is the most trusted name in dependable, high-quality gadgets.

Since 1938, Swing-A-Way® has created the highest quality, most dependable can openers on the market. Thanks to a patented gear-driven cutting wheel, each opener requires less elbow grease to turn the crank, and the rubberized handles cushion your hands from what little work they're doing.

Simple, classic, and well designed!

## Temperature Zones

### Fahrenheit

## GUIDE FOR TEMPERATURE SAFETY

### Handling Guidelines

Maintain cold foods at or below 41°F.  
Maintain hot foods at or above 135°F.

Potentially hazardous hot food should be cooled rapidly. 135°F cooled to 70°F within 2 hours. 70°F cooled to 41°F within 4 hours. Using shallow pans with a product depth of no greater than 2 inches, the food should be placed in a refrigerator uncovered or loosely covered during the cooling process.

Never defrost food at room temperature. Use a refrigerator, continuously running cold water, a microwave or cook from frozen state. Frozen food that has been thawed should be cooked or otherwise processed before it may be refrozen.

Cook foods to the proper internal temperature. Use a metal probe thermometer to ensure food is cooked properly.

Wash your hands thoroughly with hot soapy water (before and after handling food) for a minimum of 20 seconds.

Avoid handling food when: ill, have a skin infection, or have cuts on the hands.

Never cross contaminate from raw to cooked products.

Wash, rinse and sanitize cutting boards and knives between every use.

Reheat leftovers to 165°F internal temperature or higher, stirring constantly to cook evenly or microwave to 195°F. Never reheat leftovers more than once.

Keep kitchens, dining areas and storage rooms free from insects and rodents. Store chemicals away from food.

Taylor® Food Service Thermometers make food safety easy in your cooking environment. For more information on Taylor, visit our website: [www.taylorusa.com](http://www.taylorusa.com).

# ICE BATH CALIBRATION PROCESS

STEP

1

STEP

2

## FILL CONTAINER ALL THE WAY TO THE TOP WITH ICE

Crushed ice works best, because of the smaller spaces between the ice crystals.

STEP

2

## FILL CUP WITH WATER TO ABOUT ½" BELOW THE TOP OF THE ICE

Ice should not be floating off the bottom of the container. IF the ice is floating, pour off some water and add more ice.

STEP

3

## INSERT PROBE, SLOWLY STIR, CALIBRATE

Stir the thermometer probe in the center of the ice bath. Allow some time for the sensor to stabilize for an accurate temperature reading. **KEEP THE PROBE TIP AWAY FROM THE SIDES AND BOTTOM OF THE CUP FOR BETTER ACCURACY.**

YOUR THERMOMETER SHOULD READ 32°F (0°C) in the ice bath. Adjust your thermometer as directed by the thermometer's instruction manual; **HOWEVER** before you adjust any thermometer check that the readings are within the manufacturer's accuracy specifications. IF it's within the specified tolerance, don't adjust the thermometer's temperature reading!
